

# Keeping Track of Sugary Drinks

Print a form for each family member. For each family member, for one week:

- Write the type and the amount of fluid ounces (fl oz) this family member has chooses that day.
- At the end of the day, add up the numbers in the “fl oz” column *down* to see the daily total of fluid ounces of sugary drinks for this family member.
- At the end of the week, add the totals *across* to get a grand total of all the fluid ounces of sugary drinks this family member had for the week.
- As parents, when you see how many ounces of sugary drinks each family member drinks in a week, you can lead a family discussion to decide if, how, when, and what kind of changes you’d like to make.
- When you are ready to make a change, set a goal together to reduce the kinds or the amount of sugary drinks you have.
- Use this form again to see how you are doing.

Name:

Date:

**What are some types of sugary drinks?** Regular (not diet) sodas, fruit-flavored drinks (like lemonade, fruit punch and nectars), sports drinks, flavored waters and flavored milks.

Sunday		Monday		Tuesday		Wednesday		Thursday		Friday		Saturday
